

2-FACTOR AUTHENTICATION

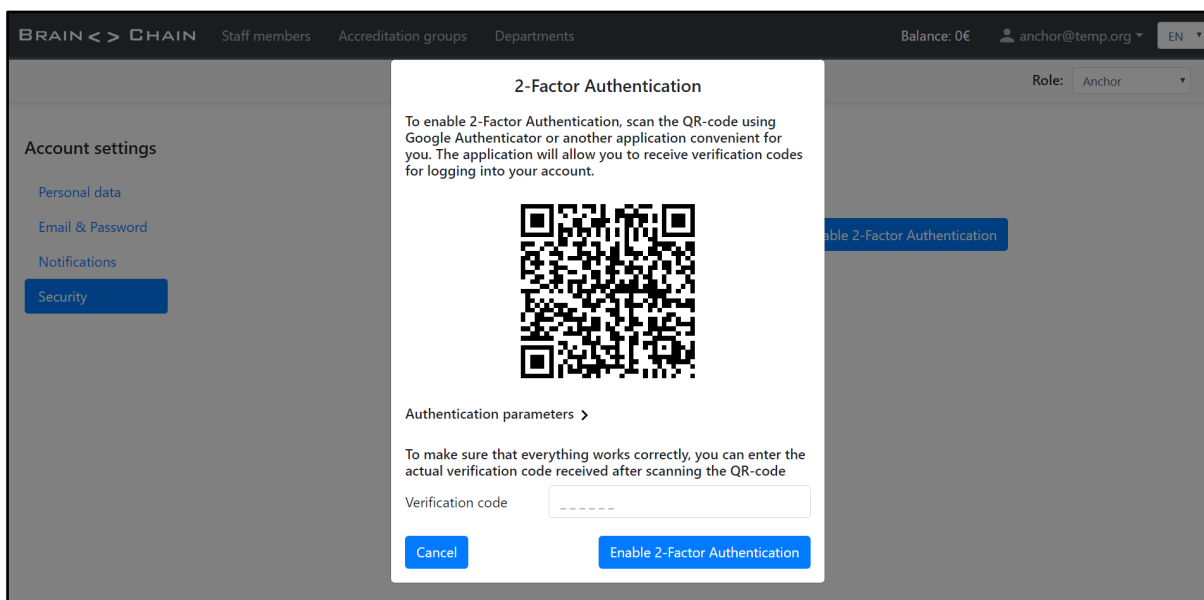

Enabling 2-Factor Authentication

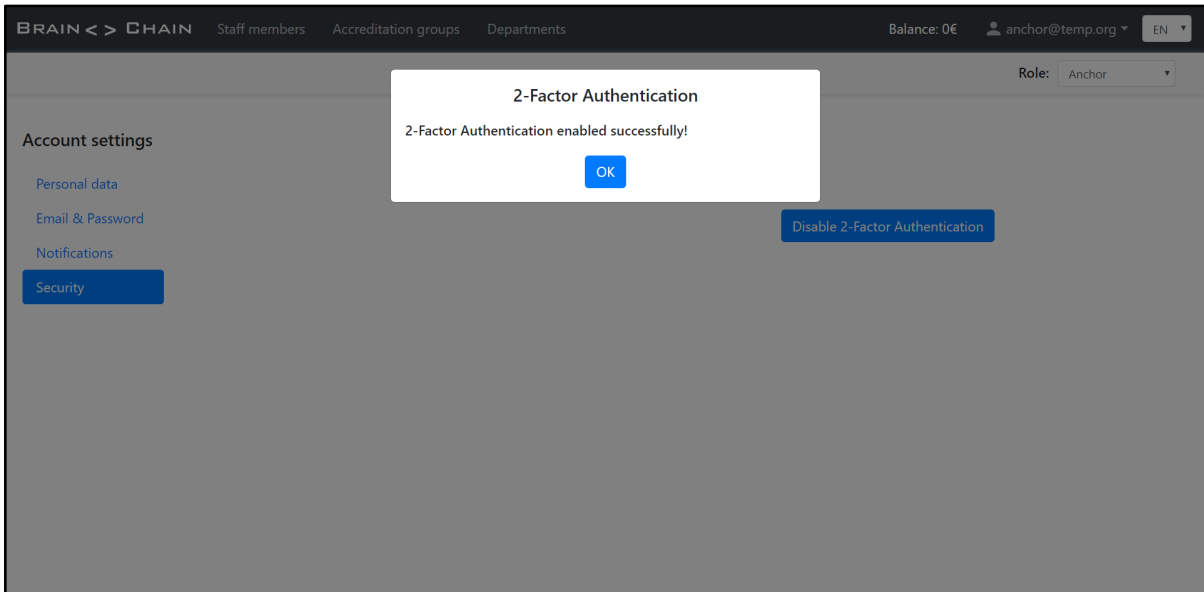

1. To *enable* 2-Factor Authentication, the User should open the “Account settings” page by clicking on his email in the navigation bar atop, where the corresponding option can be selected. Then User should then click the “Security” tab at the menu on the right:

2. Then User should click the “**Enable 2-Factor Authentication**” button. A modal dialog will open.

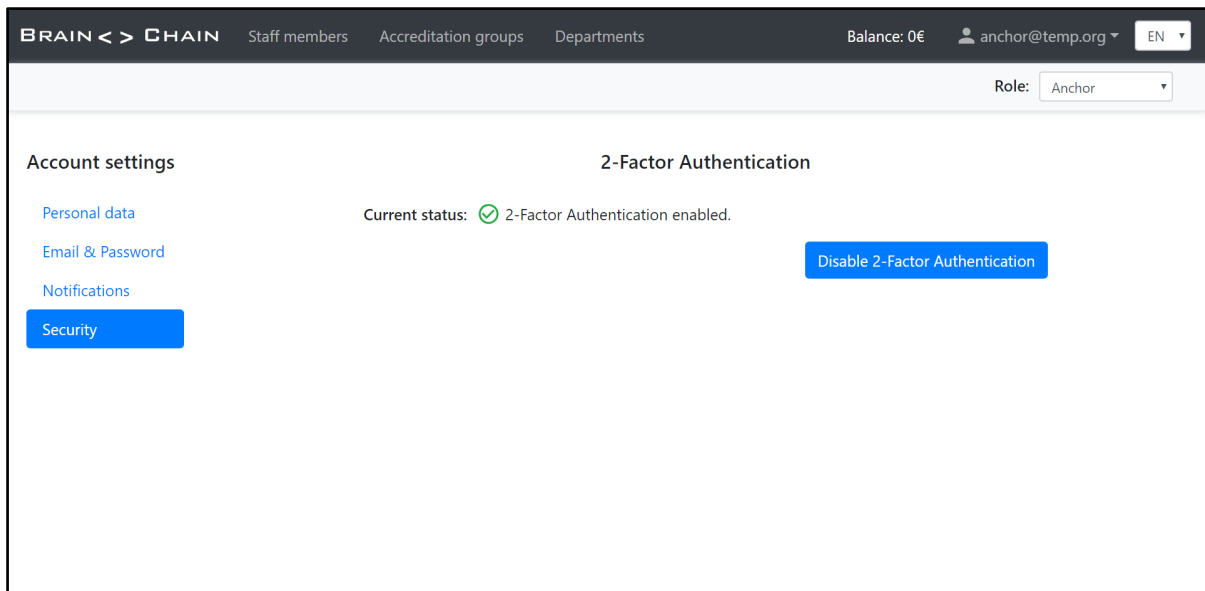

3. After following the instruction in the modal dialog, the User can click “**Enable 2-Factor Authentication**” — that’s it! You get confirmation of this effect via a dedicated dialog window:

2-Factor Authentication successfully *enabled!*

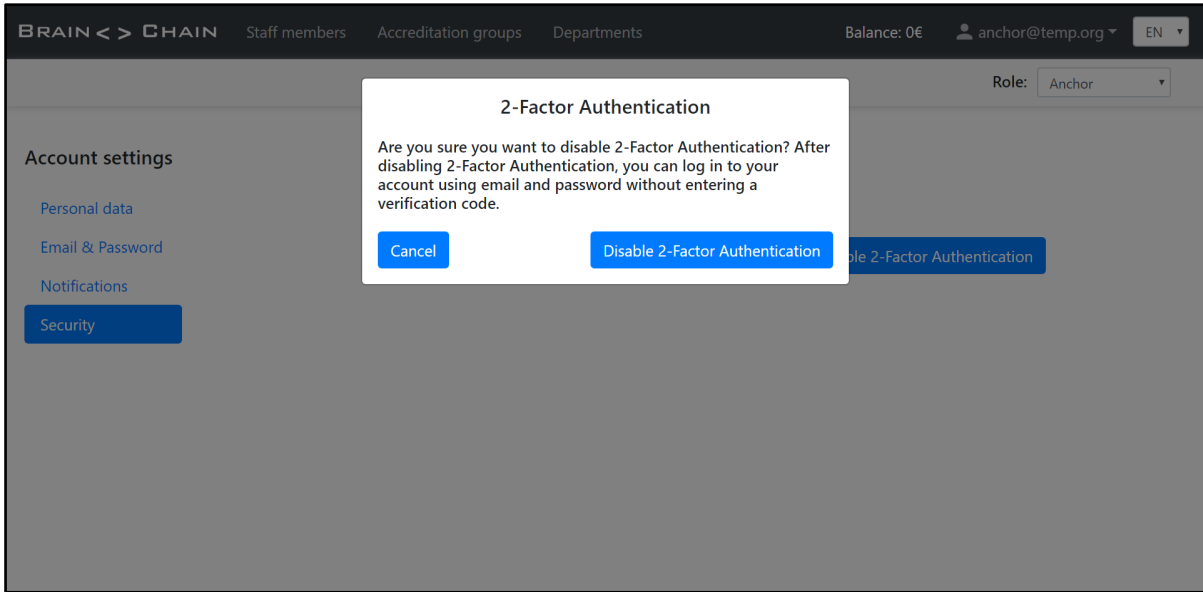

Disabling 2-Factor Authentication

1. To *disable* 2-Factor Authentication, the User follows the same path but selects "Disable 2-Factor Authentication":

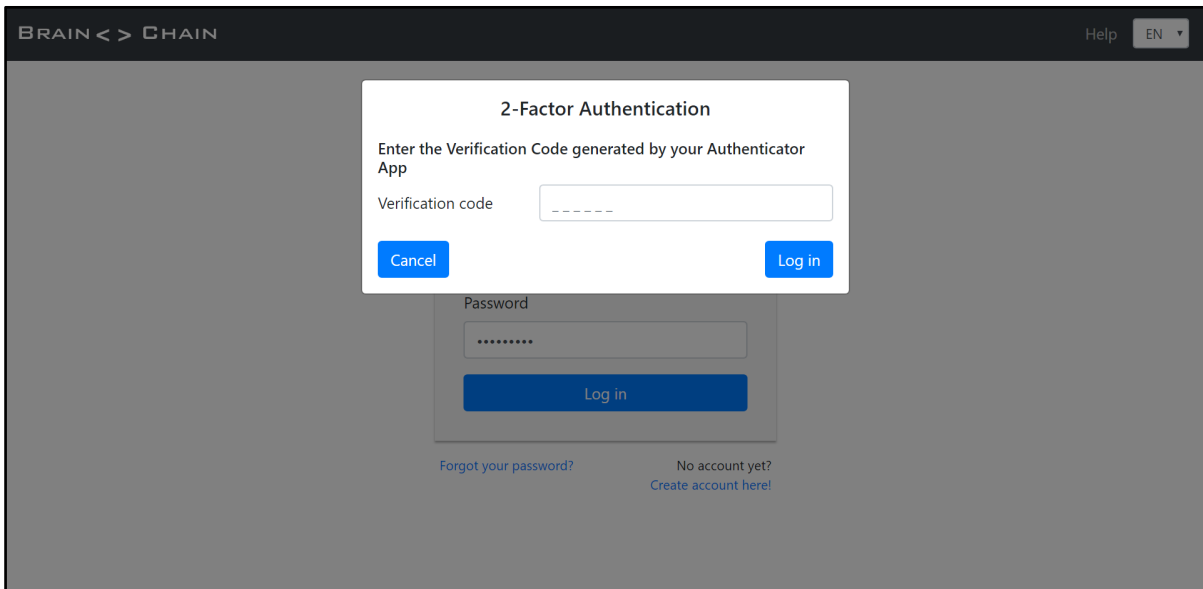

2. A modal dialog will open:

To proceed, the User selects "Disable 2-Factor Authentication". This effectively disables 2-Factor Authentication.

Log in with 2-Factor Authentication enabled

1. After the User entered their Email & password and clicked "Log in", a modal dialog opens:

2. The User should enter their verification code there and click "Log in" to proceed. This will open the home page:
